## Keytracker European Vehicle Tracker

The comprehensive GPS & GPRS data recording and tracking system for vehicles.

Web based state-of-the-art technology with fast Satellite communication and pin-point mapping, allows you to access your own information anytime via the internet.

The way it works.

The pre-programmed Keytracker Vehicletracker Box is fitted out of sight in around 30 minutes.

When the ignition is turned on, the Vehicletracker Box records the exact time and location, then every few seconds\* continues to record the precise position, speed, route, direction and time.

Every 5 minutes, or when the ignition is turned off, all information is downloaded by satellite and data sim card to a massive secure database. Whenever you require information simply access the database with your username and password.

Then choose to either:

View all vehicle movements and data accurately pinpointed on a high resolution map or listed in a report, or only view the exceptions (over a certain speed, mileage, hours, etc)

Coloured icons make very clear reading.

\*Performance units for use in race cars can be set to record up to every 5 seconds, by special order. The GPS will pinpoint the track position, speed, route, direction and time. Standard road units are set to record information every 60 seconds.

### Simple - Clear - Fast – Accurate

The Keytracker VehicleTracker "Box Telematic" system is UK insurance approved and may reduce premiums.
