KEY TRACKER®

Secure Management
of Keys & Equipment

Some of the businesses that we are currently working with:

About Us

Accessibility of keys and equipment is crucial to every business, but keeping these secure whilst readily available, without time consuming administration can prove challenging.

Keytracker products are designed to effectively manage, track and control valuable keys and/or smart devices which allows our customers to do what they do best, without the hassle of searching for or replacing lost keys or equipment.

Keytracker products are relied upon 24 hours a day by Property and Facilities Managers, Retailers, Manufacturers, Educational Establishments, Government Departments, Airports, The Emergency Services, Motor Dealers, Fleet Operators and many more.

Case Study: Motor Range

Motor Range is one of the most recognisable motor dealers in the North West with a site holding approximately £7- 8 million worth of stock. As their site expanded the operations team needed to address the issue of missing keys. Keytracker worked with Motor Range to provide them with an Electronic locking system to store and manage all keys. Steve Pearce, Operations Manager said "The Keytracker System has proved invaluable to us, since we have had the system in place we are able to track the whereabouts of every key onsite."

Case Study: Douglas and Gordon

Douglas and Gordon is a family owned independent estate agency based in London. Keytracker installed a Mechanical System in to each of the 17 Douglas and Gordon branches, which manages and secures the multiple property keys. Through the individual personalised access pegs, it is always easy to identify who has the keys to a property at any time and reduces the risk of opportunist theft. Ailsa Monro, Team Assistant Manager said "The keys are now stored in a much safer way, this allows us not only peace of mind but also reduces the risk of lost keys and theft."

What our customers say about us...

"The system has saved the team time recording and locating vehicle keys in the fleet, it has also made the reporting process we follow more accurate especially in the calculations of staff overtime claims." Jeremy Barnes, Key and Asset Control Software

"We are very pleased with the new system, it provides 100% better key management, and is great to instantly identify who has which keys. The service we got from the Keytracker team was great, they were helpful and took the time to understand what we needed." Graham Cann, Mechanical Key System

"By rolling out the locker systems across multiple stations we can ensure the safety, security and importantly the reliability of those valuable pieces of equipment." Ian Hughes, KT Lockers

"We would recommend a Keytracker system to anyone and can't praise Keytracker enough, every bit of our dealings with them has been seamless. Everyone I've spoken to has been unbelievably helpful and friendly." Ailsa Monro, Mechanical Key System

"Since having the systems installed across our sites we have seen a decrease in time spent finding the correct keys for a building or area and have full visibility of who has accessed keys, at what time and for how long." Andrew Howarth, Electronic Key System

Mechanical Key Systems

The Keytracker Mechanical Key System is a simple peg-in peg-out solution for managing keys; issuing all authorised users with personalised ‘access pegs’ guarantees that when a set of keys is removed from the cabinet, the exact identity of the person who removed them is obvious at a glance.

Locktracker - Mechanical

Using unidentifiable locks to lock out machinery for service and maintenance purposes poses a major Health and Safety risk to any business.

By using the simple peg-in peg-out system, the Mechanical Locktracker will securely store all numbered locks and keys together in their correct position.

When keys and locks are removed the unique access peg will identify which trade and individual is on site and what machine they are working on. This provides peace of mind that a locked-out machine cannot be made operational by human error.

Mechanical Cabinets

Not only does a Keytracker key management system eliminate the risk of opportunist theft, but it also saves hours each week in time spent looking for keys. Used together with our secure, fast-access, self-closing steel cabinets, the security and organisation of important keys is assured.

Tool Management

The T1 unit is the simple solution for storing, securing and keeping track of a single key bunch, tool, harness or any equipment. Any item can be secured using one of the range of security seals, up to 1 metre. Once the security seals have been closed they cannot be reopened to eliminate tampering. Staff must use their unique access peg to release the item. At a glance, management or staff can quickly and easily identify which equipment is in use and by whom, whilst ensuring a speedy return to its correct storage position.

Electronic Key Systems

The Keytracker Electronic Key System keeps all keys secure and quickly accessible. The intelligent cabinets automatically record all key transactions through a powerful, easy to use software application, providing automated email reports and alerts to monitor, control and track every key movement, throughout multi-site operations.

Integration and hosting options mean that customers can manage multiple systems at different locations through a single user interface and gives the peace of mind that additional cabinets can be added if requirements change.

All Keytracker intelligent key cabinets have various access options, including PIN code, swipe card and fingerprint reader, with available add-ons including breathalyser units and cameras.

Locktracker - Electronic

Automatically recording the service and maintenance history of machines and equipment can improve efficiency and schedule routine checks.

By using the Electronic Locktracker, staff or contractors can easily remove a padlock using their unique login to lock out the machine they are working on; the system will automatically record all transactions, generating a complete audit trail for instant service or maintenance history.

The Electronic Locktracker can restrict or pre-book padlock keys to an individual, with automatic reports providing peace of mind that procedures are followed.

Key and Asset Control Software

The auditing of key and equipment transactions can be made fast and simple by using Keytracker's cloud based Key and Asset Control Software. Authorised users have fast access to all keys and equipment across sites, allowing the assignment of kit or keys from any location; the cloud-based software can be used as a standalone or networked recording & reporting system, or in conjunction with the Keytracker Mechanical Key System.

Features of the software make it adaptable for many different industries, allowing customers to tailor the software to individual requirements. Key and Asset Control Software is available on PC's, laptops, tablets and smartphones. Optional features include signature pad, fingerprint or barcode scanners.

Standard modules include: Asset control, Delivery centres, Estates, Properties and Key Holding.

RFID Loss Prevention

Loss prevention is an important concept in any organisation and in many cases, can be vital to personal safety.

Keytracker Loss Prevention Systems can signal an alarm if any item with a corresponding tag passes through a specific area such as a doorway. These systems are often used to keep valuable equipment on site, as well as restrict specific items or keys to designated areas.

KT Gateway

The KT Gateway is an intelligent doorway system that can be retrospectively fitted to any stores area, armoury, storage container or workspace.

The system uses RFID technology to scan and record tagged items that pass through the gateway, allowing the secure and recorded removal and return of equipment to a specific area by approved users.

Access Control & Biometric Integration

Maximise the benefits of your key management system by seamlessly integrating it with your access control system. With a variety of Systems such as Paxton, already compatible with Keytracker's Electronic System, ensure all site movements are easily controlled in conjunction with existing systems.

ievo

Our biometric integration with ievo adds additional security to Electronic Key Systems, the ievo ultimate fingerprint reader ensures cases of unauthorised access to electronic cabinets by stolen PIN or swipe card are eliminated. Using Multispectral Imaging (MSI) the reader has been designed to provide highly accurate readings even in harsh conditions, making the ievo Ultimate a perfect access solution in any location.

Lockers for Business Item Loans

Used for the automated management, storage and charging of important equipment, the locker systems enhance security and improve workplace efficiency whilst also reducing theft, damage and loss.

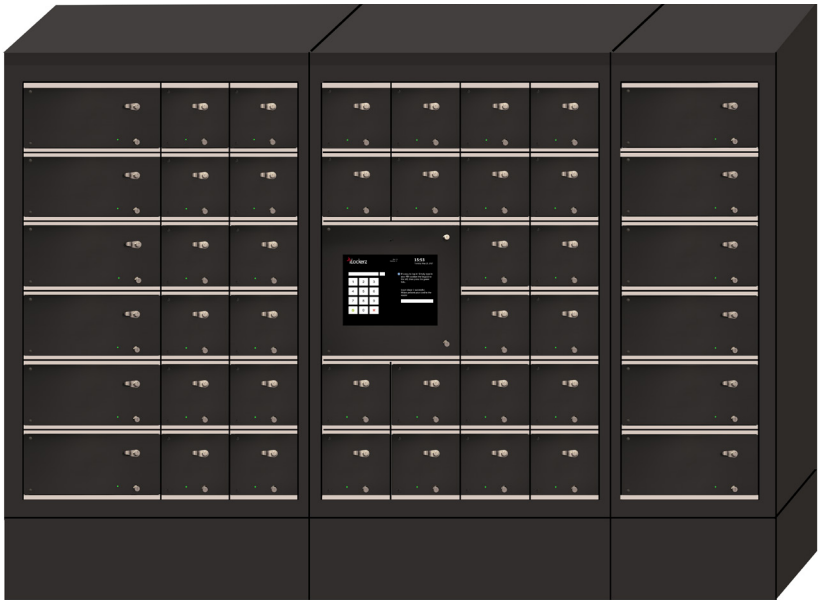
Operating 24/7, KT Locker systems are relied upon by a wide range of organisations, including schools, universities, manufacturing facilities, service operations, armouries and public spaces, to automatically vend important equipment to approved users. Built in charging and reporting ensures continuous maximum efficiency.

Combine the time savings achieved with automated asset loans with the ability to monitor equipment usage and status from any device, and the result is a locker system that serves as a real attribute to any business.

Lockers for Personal Item Storage

Lockers in BYOD (Bring Your Own Device) mode allows users (visitors, students, staff etc.) to securely store and charge their personal items in central locations for short periods to enhance visitor and staff experience whilst improving security and safety.

Available as a free to use or pay to use service, the secure locker systems can be implemented to increase revenue and dwell time in specific areas or spaces.



Lockers for Package Delivery

Smart package delivery, laundry and parcel lockers that are perfect for first mile and last mile delivery requirements, laundry drop off and pick-up or package collection (when combined with a click and collect service). iLockerz package delivery lockers are the most secure and robust lockers available, whilst also being easy to use and versatile with over 10 locker door sizes.
